# Contents

<b>1</b>	<b>Paramagnetism</b>	<b>1</b>
1.1	Introduction . . . . .	1
1.2	Quantum mechanics of atoms . . . . .	5
1.2.1	L-S ( Russel-Saunders ) coupling . . . . .	5
1.2.2	Hund's rules . . . . .	8
1.2.3	Spin-orbit splitting . . . . .	9
1.3	The quantum theory of paramagnetism . . . . .	10
1.4	Crystal-field corrections . . . . .	14
1.4.1	Effects of crystal-field symmetry . . . . .	15
1.4.2	Stevens operator equivalents . . . . .	19
1.5	Quenching of L . . . . .	23
1.6	Time reversal and spin . . . . .	26
1.6.1	Kramers degeneracy . . . . .	27
1.7	Effective Spin Hamiltonian . . . . .	28
1.7.1	Effective gyromagnetic ratio . . . . .	30
1.7.2	Single-ion anisotropy energy . . . . .	30
<b>2</b>	<b>Interacting Spins</b>	<b>35</b>
2.1	Weiss model of ferromagnetism . . . . .	35
2.1.1	Critical behaviour of Weiss model . . . . .	37
2.2	Microscopic basis of magnetism . . . . .	38
2.2.1	The direct exchange interaction . . . . .	39
2.2.2	The superexchange mechanism . . . . .	48
2.2.3	The RKKY interaction . . . . .	53

<b>3</b>	<b>Mean Field Approximation</b>	<b>57</b>
3.1	Helmholtz Free Energy . . . . .	57
3.2	Mean Field Susceptibility . . . . .	67
3.3	Specific Heat of Ferromagnet . . . . .	69
3.4	The Oguchi method. . . . .	72
3.5	Modulated Phases . . . . .	77
3.6	MFA for Antiferromagnetism . . . . .	81
3.6.1	Longitudinal susceptibility . . . . .	84
3.6.2	Transverse susceptibility . . . . .	86
3.6.3	Spin-flop and other transitions . . . . .	89
3.7	Helimagnetism . . . . .	93
3.8	Goldstone's theorem . . . . .	99
<b>4</b>	<b>Spin waves</b>	<b>103</b>
4.1	Introduction . . . . .	103
4.2	Holstein-Primakoff transformation . . . . .	108
4.3	Linear spin-wave theory . . . . .	109
4.4	Semiclassical picture . . . . .	111
4.5	Macroscopic magnon theory . . . . .	114
4.6	Thermal properties . . . . .	116
4.6.1	Total spin deviation . . . . .	116
4.6.2	Non-linear corrections . . . . .	119
4.7	The Heisenberg antiferromagnet . . . . .	121
4.8	Introduction . . . . .	121
4.9	AFM spin-waves . . . . .	122
4.10	Sublattice magnetization . . . . .	127
4.11	Ground state energy of AFM . . . . .	129
<b>5</b>	<b>Green's functions methods</b>	<b>133</b>
5.1	Definitions . . . . .	133
5.2	Spectral representation . . . . .	136
5.3	RPA for spin 1/2 ferromagnet . . . . .	140
5.4	Comparison of RPA and MFA . . . . .	144
5.5	RPA for arbitrary spin . . . . .	145
5.6	RPA for ferromagnets . . . . .	148
5.6.1	Paramagnetic phase . . . . .	148
5.6.2	Linear FM chain . . . . .	152

5.6.3	Square FM lattice . . . . .	153
5.7	FM with a finite applied field . . . . .	156
5.8	RPA for antiferromagnet . . . . .	157
5.8.1	Spin 1/2 AFM . . . . .	157
5.8.2	Arbitrary spin AFM . . . . .	159
5.8.3	Zero-point spin deviation . . . . .	161
5.8.4	Correlation length . . . . .	162
5.9	RPA susceptibility of AFM . . . . .	166
5.10	Spin-flop transition . . . . .	171
5.11	$\chi_{  }$ at low $T$ . . . . .	172
5.12	Transverse susceptibility . . . . .	174
5.13	Single-site anisotropy . . . . .	176
5.14	Dynamic linear response . . . . .	179
5.15	Energy absorbed from external field . . . . .	184
5.16	Susceptibility of FM . . . . .	185
5.17	Corrections to RPA . . . . .	186
<b>6</b>	<b>Dipole-Dipole interactions</b>	<b>189</b>
6.1	Dipolar Hamiltonian . . . . .	189
6.2	Dipole-exchange spin-waves . . . . .	195
6.3	Uniform precession ( $k = 0$ ) mode . . . . .	201
6.4	Eigenmodes for $k \neq 0$ . . . . .	204
6.4.1	Demagnetization factors . . . . .	206
6.5	Ellipticity of spin precession . . . . .	207
6.6	Effect of magnons on total spin . . . . .	208
6.7	Magnetostatic modes . . . . .	210
<b>7</b>	<b>Itinerant Magnetism</b>	<b>217</b>
7.1	Introduction . . . . .	217
7.2	Hubbard Hamiltonian . . . . .	219
7.3	Instability of paramagnetic phase . . . . .	222
7.4	Magnons in the Stoner model . . . . .	224
7.4.1	The RPA susceptibility . . . . .	224
7.4.2	Singularities of the susceptibility . . . . .	227
7.5	$T_c$ in Stoner model . . . . .	233
7.6	Metals with degenerate bands . . . . .	235
7.7	Spin-density waves . . . . .	239

7.8	Hartree Fock description of SDW . . . . .	242
7.9	Effects of correlations . . . . .	250
7.9.1	Kinetic exchange interaction . . . . .	252
<b>8</b>	<b>Indirect Exchange</b>	<b>263</b>
8.1	Introduction . . . . .	263
8.2	Effective s-d exchange interaction . . . . .	265
8.3	Indirect exchange Hamiltonian . . . . .	274
8.4	Range function and band structure . . . . .	275
8.5	Semiconductors . . . . .	285
8.5.1	Intrinsic semiconductors, high $T$ . . . . .	285
8.5.2	Intrinsic semiconductors, low $T$ . . . . .	287
8.5.3	Degenerate semiconductors. . . . .	288
8.6	Magnetic multilayer systems . . . . .	289
<b>9</b>	<b>Low dimensions</b>	<b>293</b>
9.1	Introduction . . . . .	293
9.2	Mermin-Wagner theorem . . . . .	294
9.2.1	Bogoliubov inequality . . . . .	295
9.2.2	Application to the Heisenberg model . . . . .	296
9.3	Dipolar interactions in low dimensions . . . . .	300
9.3.1	Dipole-exchange cross-over . . . . .	305
9.4	One dimensional instabilities . . . . .	305
9.5	Antiferromagnetic chain . . . . .	308
9.6	RPA for the AFM chain . . . . .	311
9.6.1	Exchange dominated regime . . . . .	311
9.6.2	Dipolar dominated regime . . . . .	315
9.7	Dipolar interaction in layers . . . . .	316
9.7.1	Monolayer . . . . .	318
9.7.2	Bilayer . . . . .	320
<b>10</b>	<b>Surface magnetism</b>	<b>329</b>
10.1	Introduction . . . . .	329
10.2	MFA treatment of surfaces . . . . .	330
10.3	Surface excitations . . . . .	334
10.4	LRPA method . . . . .	335
10.5	Wave functions for bulk and surface . . . . .	343

10.6	Surface density of magnon states . . . . .	344
10.7	Surface phase-transitions . . . . .	347
10.8	Dipolar surface effects . . . . .	351
10.9	Surface magnetism in metals . . . . .	354
<b>11</b>	<b>Two-magnon eigenstates</b>	<b>361</b>
11.1	Introduction . . . . .	361
11.2	Green's function formalism . . . . .	364
11.3	One dimension . . . . .	371
11.4	Two dimensions . . . . .	374
11.5	Summary of results . . . . .	375
11.6	Anisotropy effects . . . . .	377
<b>12</b>	<b>Other interactions</b>	<b>381</b>
12.1	Introduction . . . . .	381
12.2	Two-magnon interaction . . . . .	385
12.3	Three-magnon processes . . . . .	387
12.4	Magnon-phonon interaction . . . . .	392
12.5	Bilinear magnon-phonon interaction . . . . .	395
<b>A</b>	<b>Group theory</b>	<b>401</b>
A.1	Definition of group . . . . .	401
A.2	Group representations . . . . .	403
A.2.1	Reducibility . . . . .	403
A.3	Orthogonality relations . . . . .	405
A.4	Projection operators . . . . .	406
A.5	Coordinate transformations . . . . .	406
A.6	Wigner-Eckart theorem . . . . .	407
A.7	Space groups . . . . .	409
A.8	Bloch's theorem . . . . .	411
<b>B</b>	<b>Appendix B</b>	
	<b>Time Reversal</b>	<b>413</b>
B.1	Antilinear operators . . . . .	413
B.2	Anti-unitary operators . . . . .	415
B.3	Time reversal . . . . .	416
	<b>Index</b> . . . . .	<b>419</b>
